

HYPOCHLOROUS ACID

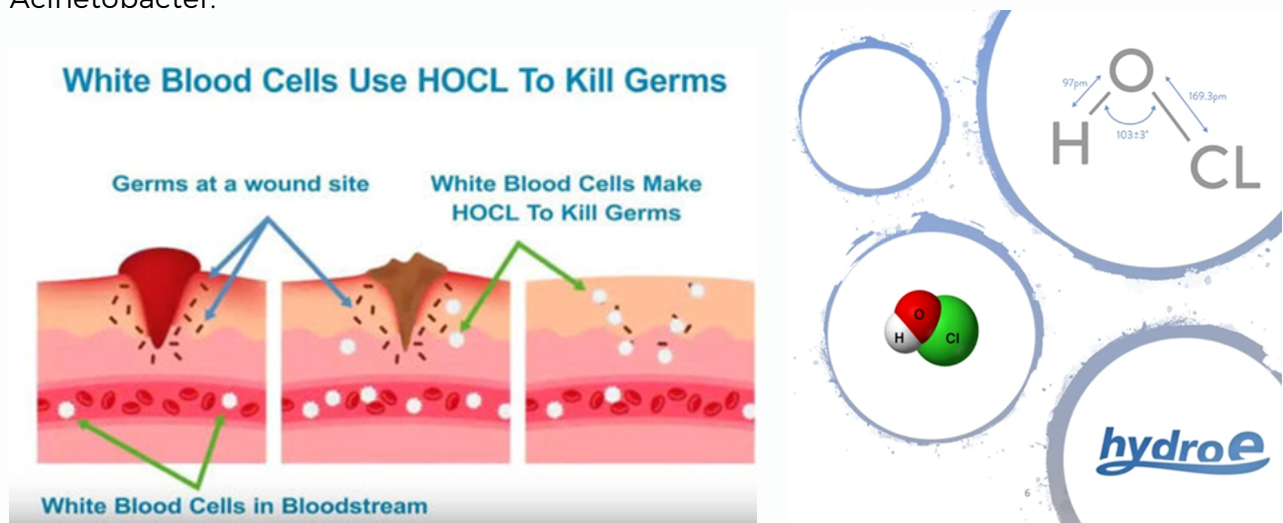

HOW IT WORKS

The Immune system & HOCl

Our body has its own defense known as white blood cells, that use **HOCl (Hypochlorous Acid)** to combat foreign invading microorganisms like bacteria, and fungi.

These white blood cells (also known as neutrophils) respond to any tissue invasion by migrating to the site of infection. Neutrophils seek out these invading microorganisms, surround and eliminate them using HOCl. This process is known as phagocytosis.

Hydro-E is a hard surface disinfectant which is effective against germs and a broad range of bacteria including staphylococcus aureus (MRSA), VRE, CPE/CRE, Salmonella and Acinetobacter.

With our science-backed patent, Hydro-E have developed the ability to stabilise the bonding process, and fortify the concentration so that the HOCl solution remains active for at least 12 months after manufacture.

Our Hydro-E disinfectant and sanitiser enables you to protect your family without the unpleasant toxic/hazardous products.

Below are some of the benefits of Hydro-E:

- Kills 99.99% of germs & bacteria
- Hospital Grade Approved (**ARTG: 335971**)
- Sanitiser
- Alcohol and bleach-free
- Manufactured in Australia
- Non-toxic, non-flammable, non-corrosive
- Odourless, residue-free
- Eliminates a broad range of bacteria including S. aureus (MRSA), VRE, CPE/CRE, Salmonella and Acinetobacter.
- pH neutral

INGREDIENTS

99%+ Distilled Water and less than 1% HOCl
